need replacing go beyond inconvenience.

Alphr: "Every year, in the United Kingdom alone, 600 million disposable batteries are thrown away, with only a third of these being recycled. While the amount of mercury in these alkaline batteries has been reduced, the substances in batteries leak into the soil and groundwater in landfills, releasing pollutants and toxins into the air."

Ossia has other alarming numbers. "Each year, more than 3 billion batteries are thrown away in the United States alone. Although battery makers have reduced the quantity of toxic materials in batteries, battery disposal remains regulated and poses environmental risks."
